SIX KEYS TO DESIGNING A LEARNING JOURNEY FOR LEADERS

HOW TO CREATE TRANSFORMATIVE DEVELOPMENT EXPERIENCES

Learning Journeys Are Not Alike
Leadership is a journey of learning opportunities, in which individuals face transformational challenges that help them grow with time. For this reason, no two journeys are alike.

Consider the following questions to gauge the quality of how you currently develop leaders:

1. Is there a clear link between business goals and your leaders’ development plans?
2. Do you have a cookie-cutter approach to leadership development, or do you personalize the experience for your leaders?
3. What do you do before and after formal learning or training to ensure the application of new skills?
4. Do you involve senior management in development initiatives?

How do you get started?
Here are six things to keep in mind when creating a Learning Journey:

1. Begin with the end in mind.
Start a dialogue with senior stakeholders and management teams to help contextualize and gain their buy-in to support this development investment. Discuss the key strategic priorities, cultural issues, leadership competencies, objectives and benefits of the program, expected challenges and barriers, and the support learners need to make the journey a success.

2. Know where the gaps are.
A well-designed Learning Journey starts with an accurate diagnosis to determine and focus on the most critical leadership skill gaps. This may be a group needs analysis or individual assessments based on 360-feedback or assessment centers. When a learner knows exactly where his...
or her gaps are, it creates a tension—and increased momentum—to improve and change.

3. **Extend learning beyond development events.**

The 70:20:10 philosophy—where 70 percent of the learning occurs on the job, 20 percent comes from others, and 10 percent is in formal learning experiences—helps drive a culture of continuous learning where leaders are getting the support and development they need, even when they don’t realize it. Organizations that get it right are finding ways to engage their learners more before, during, and after the formal development events with the right mix of methodologies including coaching from mentors, projects back on the job, just-in-time learning through online portals, peer learning and networking groups, simulations, and executive speakers. Social technology further enables the 70:20:10 approach. The term “Learning 2.0” describes the ability to take new social media tools (like blogs, wikis, and discussion forums to name a few) and use them to enhance Learning Journeys.

4. **Involve the learners’ direct managers.**

Do you often hear: “Is my boss going through this too?” Like any successful leadership development initiative, successful execution of a Learning Journey requires support from the leaders of the learners and management. Without buy-in from the senior management team, and the continued support of the direct managers who manage those embarking on the Learning Journey, the initiative will surely fail. Involve them by providing content overviews through formal programs and reference guides. Establish learner-manager meetings to set expectations and agree on specific ways and opportunities to apply the new skills in a project or to solve a real business issue.

5. **Measure impact.**

Conduct individual or group assessments after the formal learning component to evaluate the effectiveness and impact of your Learning Journey. Tools include self-assessments to promote learning insight, feedback surveys around critical skills, behavioral assessments, program evaluation, and measurement of impact.
impact or ROI. Documented success will help build the case to create more Learning Journeys in the future to benefit more leaders.

6. **Plan for flawless execution.** Clarify parameters of the Learning Journey such as timings for the initiative, audience size, and delivery modalities (e.g. instructor-led, virtual, or Web-based options). Consider the Learning Journey’s alignment with other talent systems and processes. Confirm accountabilities and milestones with the project team from design to implementation.

When designed right, three critical perspectives converge in the Learning Journey, enabling individual and organizational transformation. These perspectives are *business*—understanding and solving business challenges and cultural priorities; *role*—improving leadership in one’s area as well as the overall organization; and *self*—evolving one’s knowledge, experience, competencies, and beliefs.

A journey often denotes more than simply going from one place to another—it invokes a sense of personally meaningful change; that you will return somehow different from when you left. Leadership development must simulate the essence of taking a journey so that, upon return, leaders and their organizations are transformed. And just like any other journey, a Learning Journey requires planning, discipline, and execution to be successful.
